-  SP Specific Engineering Plan - See Page 24 of MS&R Plan
-  County Scenic, Not Major Route

## NOTES

- Right-of-way widths are measured at mid-block and are used to establish the future right-of-way line locations in the Major Streets and Routes Setback Zone, Division 26 of the Zoning Code.
- The right-of-way widths may be exceeded:
  - Within 600 feet of any intersection of two major streets.
  - At the location of a change of right-of-way width, where the taper for transition may extend 600 feet from the point of change.
  - In locations where the prevailing existing City-owned right-of-way along the block or section is greater.
- Except as provided below, the future right-of-way area is generally measured midblock from the survey centerline of the street. It is generally equal to one-half the right-of-way width designated for that street.
- The mid-block right-of-way widths and centerline locations may be modified by corridor study maps and street right-of-way/improvement plans on file with the Department of Transportation (see Appendix). For such maps or plans, the right-of-way setback is measured from the future right-of-way line as shown on the corridor study maps or street right-of-way/improvement plans.
- Under the provision of the MS&R Setback Zone, no structure, off-street parking, vehicular circulation, off-street loading, or maneuvering space, landscaping, or screening improvements required by the Zoning Code, may be constructed, erected, placed, or extended in the future half right-of-way area unless specifically allowed. The future right-of-way area that is not publicly owned may be included in the site coverage calculation and used to meet landscaping requirements or reduce required parking.
- In compliance with the requirement of the MS&R Setback Zone, plans submitted for the issuance of building permits and development plans and tentative plats submitted for review must show the applicable setback from the future right-of-way line as a condition of approval. In cases of hardship, a variance may be requested from the MS&R Setback Zone requirements.

RIGHT-OF-WAY WIDENING AT INTERSECTIONS FOR STREETS ON M S & R MAP

A equals mid-block width. The City Engineer will determine values B, C, and D when necessary for mid-block widths not in the following table (e.g. A equals 110)

A	B	C	D
64	90	200	200
76	100	300	200
80	100	300	200
90	120	300	300
100	130	300	300
120	150	300	300
150	150	N/A	N/A
200	200	N/A	N/A
